

AudioVAULT Flex provides an entirely new studio platform with more capacity and flexibility for adding and personalizing format channels over the air or on the Internet. New capabilities enable stations to do more with less, while time-proven AudioVAULT programs at the application layer offer consistent, reliable studio performance.

Completely redesigned for AudioVAULT Flex, AVAir will take your studio operations into the future. Ready today for future formats and technologies, including HD Radio™ multicasting and multi-channel surround sound, AVAir provides the tools you need to work smarter and achieve more!

## Key Features & Benefits

- Fully customizable interface, letting you create workspaces that enhance creativity
- AVAir interface can be uniquely configured for specialized applications, such as monitoring HD2 or Internet-only channels
- New navigation pane with better search capabilities and nearly unlimited levels of organization allows you to find the audio you need faster
- One central AudioVAULT location lets your stations share resources and do more with less
- Sophisticated asset management provides more tools for personalizing and repurposing music libraries for multiple channels
- Multi-thread engine offers live, interactive workgroup collaboration from separate studios, in real time
- New segue editor allows for seamless voice tracking and localizing multiple stations from a centralized studio
- Interactive collaboration technology allows multiple people to record voicetracks for the same day at the same time
- Unprecedented internet connectivity puts RSS and information feeds right in the AVAir workspace
- Enhanced quick start gives operators access to an unlimited number of button palettes, with each button instantly configured to playback audio, position phoners, place sound effect drops and more!

## Achieve More with AudioVAULT Flex

Advanced Features	Increased Benefits
<b>Stand Alone Engine</b>	Gives users the ability to switch between user screens while the playlist continues uninterrupted.
<b>Unique User Profiles</b>	Allows users to customize their workspace by creating their own look and feel to AVAir.
<b>Many-to-One User Connectivity</b>	Allows multiple on-air talent to view, modify or manipulate the log at the same time. Conversely, one may have creative control while the other is able to simply monitor the screen as the air shift progresses.
<b>One-to-Many Monitoring Capabilities</b>	Allows multiple station performance and operations to be monitored and/or controlled from one central location.
<b>Enhanced Segue Editor</b>	More than just a voice tracker, the newly embedded Segue Editor allows users to modify the segue between on-air elements, perform voice tracking, allow for single track editing and even modify Fade/Ramp/Gain control.
<b>Navigation Pane</b>	Allows elements to be placed within AVAir, including inventory tabs, quickstarts, Segue Editor, history tabs and additional elements new to AudioVAULT Flex.
<b>Radio Widgets</b>	Gives users the ability to add "widgets" within the AVAir screen for advanced functionality via RSS feeds. Widgets include temperature, weather forecast, traffic reports, news headlines, webcams and even the ability to IM chat with listeners.
<b>Persistent Log Changes</b>	AudioVAULT Flex now allows persistent log changes-meaning all your changes will be saved, even if AVAir is shut down. Quickstarts also retain changes made from within AVAir and audio elements can now be added to quickstarts through simple drag and drop operations.
<b>Integrated Control Panel</b>	Brings all the tools used to maintain AudioVAULT under one program. AVControlPanel now houses all maintenance programs along with configuration settings for easy engineering control from a single location. Changes may now be made on the fly and take effect immediately, or saved for later maintenance at a more convenient time.
<b>Touchscreen Friendly Operations</b>	Allows increased productivity and ease of use for on-air talent and eliminates need for additional purchase and maintenance of additional accessories.

Taking the next step is easy with Broadcast Electronics. Get in touch with your sales representative today to discuss solutions that will work for you and your station(s). To contact your BE sales representative, simply visit our website at [bdcast.com](http://bdcast.com) or call 217.224.9600 and learn more about what BE has to offer.

BE is the premier provider of mission-critical solutions for over-the-air and Internet radio. Our products encompass program generation, audio and data management, interfacility transport and analog and digital (HD Radio and DRM) transmission. They are used daily in more than 10,000 installations in nearly 100 countries.

For fifty years, BE pioneering developments have set industry standards for innovation and reliability, while providing broadcasters with new options for operational productivity and income generation.

BE is headquartered in Quincy, IL, and is represented worldwide by a network of local representatives.
