Software Update Available for TRE, Version 2.9 Build30

On October 1st, 2009, Broadcast Electronics released new [TRE Upgrade Kit Software Version 2.9 B030](#).

The software update is available, for registered users, from the Broadcast Electronics Technical Services website in the Registered User Section at: http://www.bdcast.com/support/registered_user.php

Instructions are included in the downloadable zip file. The included *Read ME!_v4.pdf* will provide upgrade assistance.

Please contact the Technical Services department by phone at 217.224.4700 or e-mail service@bdcast.com if additional assistance is required.

Summary of features and fixes for 2.9 B030:

1. TRE supports a new output -- Listener Driven Radio.
2. TRE supports output to Ping.fm for Web 2.0 integration. This adds the ability to send now playing data to over 40 different social networks through Ping.fm.
3. TRE supports the sending of data to SpacialAudio's SOS streaming encoder.
4. The BadASCII automation type has been renamed to simply "ASCII" and this automation type now supports the "file" input mechanism.
5. TRE has a shiny new set of icons.
6. iMediaTouch interface now checks for and ignores duplicate automation data inputs (typically, a file that has been re-written by an external process). Duplicates are determined by examining the Title and the CutID fields.
7. Station Manager option in TRECfg.exe has been renamed to "TRE-Link Protocol" to support the new TRECast and other upcoming features.
8. Message formatting for Twitter has been moved to it's own section under "Web 2.0" and now manages formatting for all supported Web 2.0 outputs.

Thank you for choosing Broadcast Electronics!
